

## MUD CRACKING

---

### CAUSES:

---

- incorrect substrate pre-treatment
- inadequate mixing of materials
- too thick pain layer
- not sufficient drying time between coats

### PREVENTION:

---

- mix the paint properly
- use a correct application of the paint layers by checking their thickness
- use application techniques and material preparation as stated in the technical data sheet

### RESTORATION:

---

- remove coating, clean the substrate and repaint it
